

Safety Components Fabric Technologies

The trusted leader in textile technology

Safety Components Fabric Technologies Inc. (SCFTI) is a vertically integrated, multi-faceted manufacturer of high performance technical fabrics. Located on 22 acres in Greenville, S.C., SCFTI's 800,000 square-foot facility contains all manufacturing, testing and warehousing functions.

Our patented outdoor fabric, WeatherMAX®, changed the marine cover market by providing a highly fade-resistant, long-lasting fabric that outperforms acrylic and solution-dyed polyester fabrics. It has proven that a fabric can be strong without weight, breathable yet highly resistant to water, rugged yet still providing a beautiful, rich appearance that today's boater expects. Made from solution-dyed Satura®Max yarns, WeatherMAX is dimensionally stable and strong and the HydroMax finish repels water and dirt. Ideal for bimini tops, mooring and playpen covers, trailerable covers and other applications that are subject to prolonged sun exposure.

With our newest marine fabric, we are again changing the expectation of marine fabricators. BreakWater X® is an advanced alloy-coated enclosure and top fabric that will not crack or peel, even after prolonged exposure to the elements.

SCFTI also manufactures technical fabrics for firefighter turnout gear, soft armor, air bags and other demanding end products.
