Herculite

*Powered by innovation,
proven by performance*

For more than 60 years, Herculite has been a leader in manufacturing flexible PVC composite textiles for applications that demand exceptional aesthetics, durability and return on investment.

Herculite's brands encompass solar protection, marine, tents and structures, health care and digital media. Our state-of-the-art manufacturing and R&D centers in Pennsylvania and Florida provide customers with the advantages that are only possible when working with a reliable U.S.-based resource for customer service, technical support and product development.

For marine applications, Herculite brands such as Herculite Regatta® and Strataglass offer superior protection for boats and crews, while its solar protection brands including Coastline Plus®, Patio 500®, Natura®, Vanguard®, and Weather-Chek® add beauty and energy efficiency to commercial and residential structures. Herculite's Architent® tent and structure fabrics provide extended performance for tent companies. Herculite's Sure-Chek® fabrics assist hospitals and other institutions in providing antimicrobial fabric solutions. Bantex® Digital Media from Herculite is engineered for unmatched color and clarity in vinyl banners and signs.

Prodim

*World leader in complete digital
templating solutions*

When it comes to digital templating within the marine building industry, the Prodim Proliner is unmatched in accuracy, speed, flexibility and ease of use due to its unique technology: measuring with a pen and a wire. You simply mark relevant points with the pen, and the exact positions of measured points are directly translated into a digital template (DXF).

Measuring with a wire does not require targets and has no reflection inaccuracies. Straight, curved and very complex shapes can be measured fast and accurately from every position. This flexibility enables marine fabricators to create digital templates of decks, covers, tops, awnings, sails and much more using only one tool.

To get the most out of the Proliner technology, Prodim developed additional solutions including the IPT for measuring hard-to-reach points, the Proliner Hookpen for measuring tubular frames, Prodim Factory Decking software to create deck designs based on Proliner measurements and the Prodim Plotter.

This enables Prodim to offer complete digital templating solutions for the improvement of the templating process, products and services.
